

Assignment – 4

DOCKER AND KUBERNETES

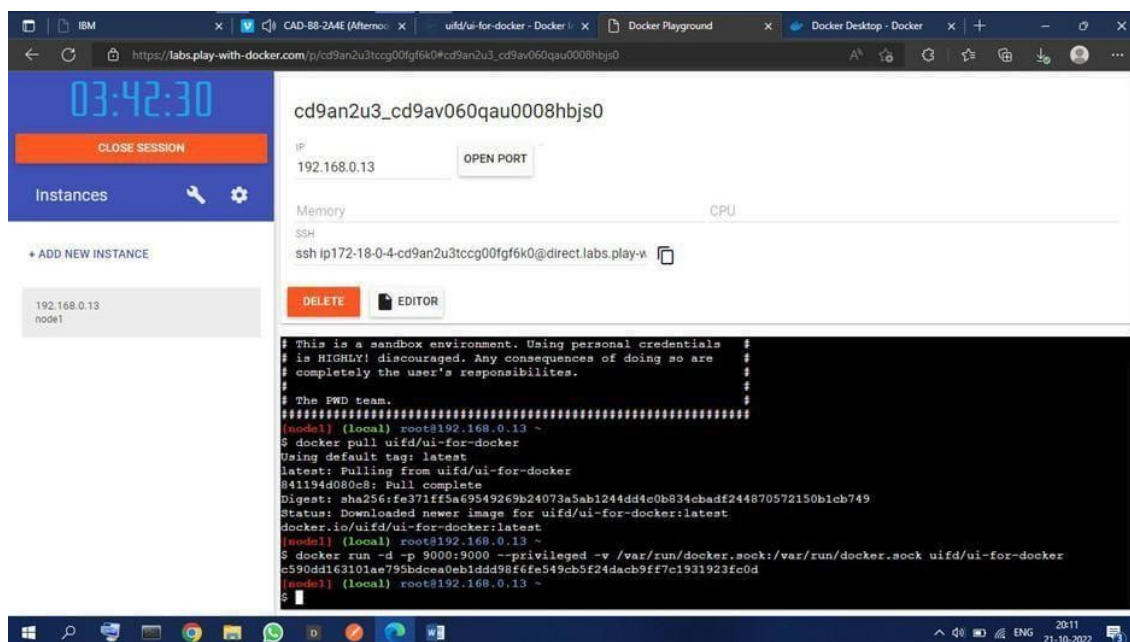

Assignment Date	21 October 2022
Student Name	Kodishwara Suruthi Kavisek K
Student Roll Number	319UEC043
Team ID	PNT2022TMID17475
Maximum Marks	2 Marks

Question 1:

Pull an Image from docker hub and run it in docker playground.

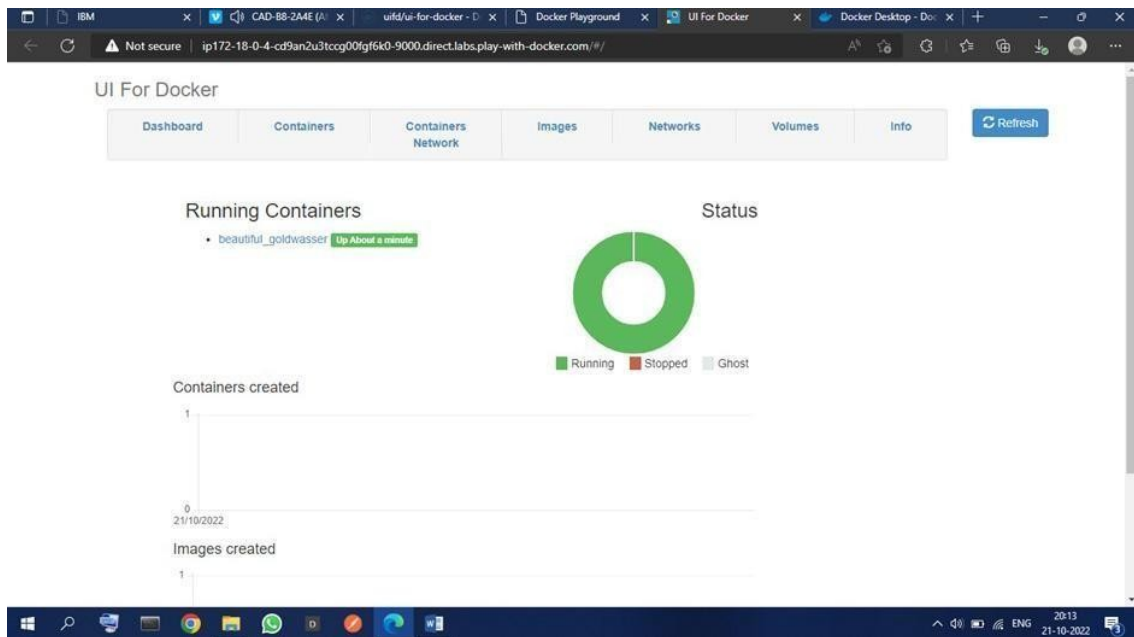

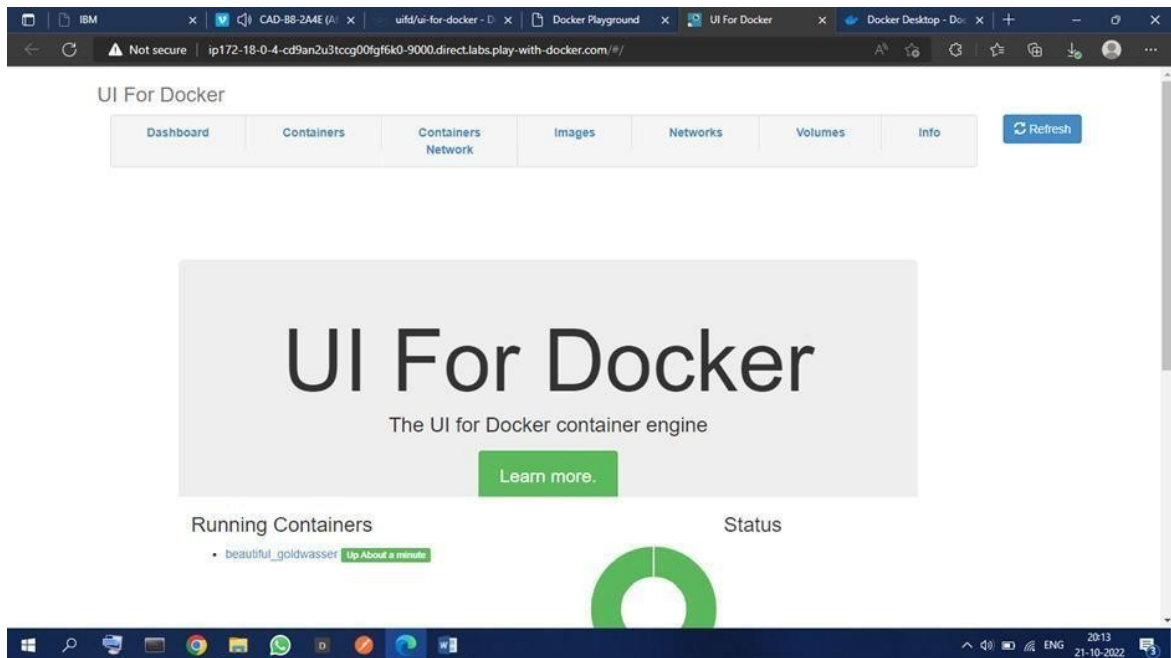

The screenshot shows the Docker Hub page for the repository `uifd/ui-for-docker`. The page includes the repository name, a star icon, and a pull count of 10M+. Below this, there is a description: "By uifd · Updated 6 years ago. A web interface for Docker, formerly known as DockerUI. Deprecated, use Portainer for new features." There are tabs for "Overview" and "Tags". The "Overview" tab is active, showing a section titled "UI For Docker" with a note that the repo is deprecated and development continues at `portainer/portainer`. A "chat on github" button is also present. To the right, there is a "Docker Pull Command" section with a code block containing `docker pull uifd/ui-for-d...`. The bottom of the screenshot shows a Windows taskbar with various application icons and system tray information.

The screenshot shows the Docker Playground interface. On the left, there is a sidebar with a clock showing 03:42:30, a "CLOSE SESSION" button, and an "Instances" section. Below this, there is a button to "ADD NEW INSTANCE". The main area displays the details of a specific instance, including its ID `cd9an2u3_cd9av060qau0008hbjs0`, IP address `192.168.0.13`, and an "OPEN PORT" button. Below these details, there are sections for "Memory" and "CPU". The "SSH" section shows the command `ssh ip172-18-0-4-cd9an2u3tccg00fg6k0@direct.labs.play-w`. There are "DELETE" and "EDITOR" buttons. The bottom section shows a terminal window with the following commands and output:

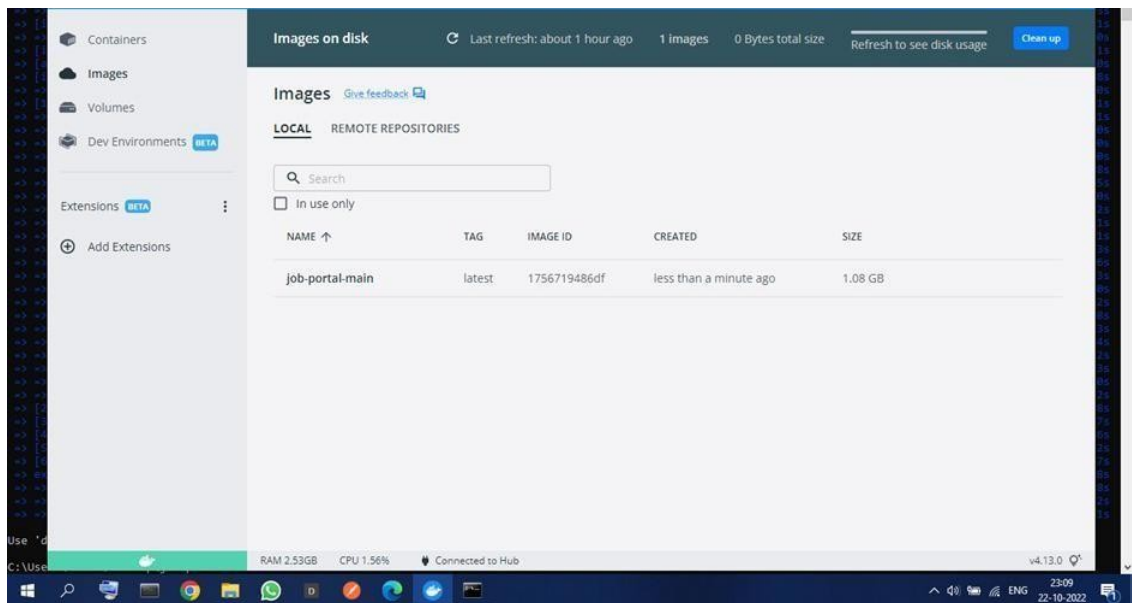

```
# This is a sandbox environment. Using personal credentials #
# is HIGHLY discouraged. Any consequences of doing so are #
# completely the user's responsibilities. #
#
# The FWD team. #

Question 2:

Create a docker file for the job portal application and deploy it in Docker Desktop Application

```
C:\Windows\System32\cmd.exe
[internal] load build definition from Dockerfile
--> transferring dockerfile: 32B
[internal] load .dockerignore
--> transferring context: 0B
[internal] load metadata for docker.io/library/python:3.8
[auth] library/python:pull token for registry-1.docker.io
[internal] load build context
--> transferring context: 607B
[1/6] FROM docker.io/library/python:3.8@sha256:f8b22afaf8bc25f0d22354d547d802591b07aad036a7faa6019d9f380afefc
--> resolve docker.io/library/python:3.8@sha256:f8b22afaf8bc25f0d22354d547d802591b07aad036a7faa6019d9f380afefc

--> naming to docker.io/library/job-portal-main
Use 'docker scan' to run Snyk tests against images to find vulnerabilities and learn how to fix them
C:\Users\VK-PC\Desktop\job-portal-main>
```

Question 3:

Create an IBM container registry and deploy helloworld app or Job portal app.

```
PS C:\Users\HP> docker tag hello-world icr.io/0034ns/helloworld
PS C:\Users\HP> docker push icr.io/0034ns/helloworld
Using default tag: latest
The push refers to repository [icr.io/0034ns/helloworld]
e07ee1baac5f: Pushed
latest: digest: sha256:f54a58bc1aac5ea1a25d796ae155dc228b3f0e11d046ae276b39c4bf2f13d8c4 size: 525
```

Question 4:

Create a Kubernetes cluster in IBM cloud and deploy helloworld image or job portal image and also expose the same app to run in node port.
